---000---

The Chairman and Councillors,
Deben Rural District Council.

Mr. Chairman,

Ladies and Gentlemen,

I have pleasure in presenting to you my 24th Annual Report for the year 1970. This report, which again follows the traditional lines, has been prepared to supply the information required by the Department of Health and Social Security.

The gradual development which has been a feature of the Rural District in recent years continued through 1970 and shows signs of continuing into the future. This places increasing demands on the Public Health administration of the District. In addition to this there is an increasing awareness on the part of the public of the evils associated with pollution of our environment with the result that the help of the Department is being increasingly invoked. The effect from the Departmental point of view is that the work load is steadily increasing.

During the year, however, the Council decided to appoint a Housing Officer to administer all matters appertaining to council housing. Much of this work, particularly the time consuming investigations, had been carried out by the Chief Public Health Inspector, Mr. Warrander whose statutory duties themselves were steadily increasing in their demands. The removal of this burden now enables him to devote his undivided attention to Public Health.

As this is the last report I shall write as Medical Officer of Health to the Deben Rural District Council I would like to take this opportunity to express my gratitude to the Council for their consideration extended to me over the years. Their sympathy and interest have always been of the greatest encouragement to me and I am most appreciative.

I would also like to thank the Staff, both past and present for their friendly co-operation at all times. I regard it as fortunate to have been able to spend the greater part of my professional life in such pleasant surroundings. I am confident that my successor will receive the same friendly consideration.

I am,

Your Obedient Servant,

C.H. IMRIE,

Medical Officer of Health.

DEBEN RURAL DISTRICT COUNCIL

PUBLIC HEALTH OFFICERS

Medical Officer of Health

C.H. IMRIE, T.D., M.B., Ch.B., D.P.H.

Chief Public Health Inspector

A.F. WARRANDER, F.A.P.H.I., M.I.P.H.E., M.R.S.H.

Additional Public Health Inspectors

R.T.W. BEDFORD, C.R.S.I.

D.P. HALL, M.A.P.H.I.

F.E. ELLISTON, M.A.P.H.I.

STATISTICS

Population

Over the past 20 years the growth in population of the Rural District has been steady but unspectacular, with an annual increase of anything up to two or three hundred. For 1970, however, the Registrar General has estimated a total population which is more than 200 below the figure for the previous year. While an isolated swing of small magnitude is not significant, it is rather unexpected especially in view of the considerable industrial development which is taking shape in the district. Further light will probably be thrown on this question when the results of the 1971 census are available.

Live Births

The live birth rate over the past ten years has declined fairly steadily keeping in step with the corresponding rate for England and Wales. The general death rate has also fallen over the same period again following the pattern for the country as a whole. Both these rates are slightly below the national rate for 1970.

Still Births

Only 3 still births were recorded during the year.

Infant Deaths

The infantile death rate of 14 per 1,000 live births still compares favourably with the rate for England and Wales which again is 18.

Deaths (all ages)

The causes of death follow, as might be expected, a similar pattern to previous years. Diseases of the heart and circulation again form the largest group and account for rather more than a half of the notifications while the malignant diseases representing approximately one-sixth of the deaths is next in order. The numbers in this latter group are remaining fairly steady but those in the heart and circulation category seem to be increasing numerically.

The age at death is shown in the table on page 9 and it is interesting to note that well over half of the deaths took place over the age of 75, many being well over that figure. An increasing number of people are now attaining an advanced age.

STATISTICS

GENERAL

Population (Registrar General's Estimate for mi	d. 1970) 37,740
Area of District in acres	109,308
Density of population - persons per acre	0.345

NOTIFIABLE DISEASE

Measles was the predominant infection in 1970 accounting for 352 out of 374 notifications. As is usual with this complaint the brunt fell on children in their first year at school and accounted for around a half of the cases. The outbreak followed the normal pattern, starting in the spring and gradually subsiding in the summer.

In view of the immunisation against measles which is being carried on it is perhaps rather surprising that the biennial swing should be so high. It must be remembered however, that a younger age group is the main recipient of immunisation and the children then of school age were by and large unprotected except for any natural acquired immunity.

Four cases of Food Poisoning were reported during the year, all being due to Salmonella typhimurium infection which is by far the commonest cause of Food Poisoning.

A young child who had travelled by air from Australia to visit grandparents in the district was ill on arrival and investigation by the District Public Health Inspector revealed that some of the food consumed on the plane had been loaded at Bombay and could well have been infected. Positive specimens were still being received from the child up to the time of departure and the parents were advised to consult their doctor on their return home.

An unusual case involved a Calf Stockman who suffered from diarrhoea for a few days at the same time as a number of calves were sick. Swabbing of the calves and a specimen from the Stockman confirmed a Typhimurium infection. With appropriate treatment and sterilisation of the animal feeding utensils the outbreak was cleared up in four to five weeks.

Two schoolgirls became unwell after attending a local fete but could not recall what food had been taken. Exhaustive enquiries failed to reveal the origin of the infection.

In all the above cases all necessary steps were taken to prevent any further spread of the infection.

1970 started with 105 cases on the Tuberculosis register but during the year the Hospital authorities made an exhaustive tidying up of their records and this resulted in 74 cases being removed from the register. Of this number many had moved away from the area, some were classified as recovered and there was one death. The number remaining on the register at the end of the year was 32.

The table below shows with a little more detail the cases on the register at the beginning and at the end of the year:-

	Resp	iratory	Non-F	Total	1	
	М.	F.	M.	F.		
Number on Register at 1st January, 1970	35	35	15	20	105

Under the heading of amenities I have referred in previous reports to the increasing number of itinerant caravan dwellers who without leave or permission encamp on Purdis Heath. This area, an attractive stretch of open heathland bordering on Ipswich is most popular with the local residents and is a noted amenity. More and more this area has been invaded by itinerants who encamp for a period and then depart leaving behind their refuse and litter. In the past all measures to forbid the area to these itinerants have failed and there seems to be an increasing number who make Purdis Heath a regular stop on their travels.

This nuisance could be overcome if the County Council, who have the necessary powers under the 1968 Act, would designate and provide a site at a suitable location for the use of itinerants resorting to this area. Such a designated site would be under official control as regards hygiene and sanitation.

WATER SUPPLY

(a) Mains supplies	Numbe	r of samp	oles
(ti)	2700000	L OI DUMP	Ipswich Corporation
